Sowing the Seeds of Love

Open
Planting Directions

- Select a site with full sun to partial sun.
 - Soil should be moist, well-drained, and average to humus-rich.
 - Plant asters in early- to mid-spring. Fertilize soil prior to planting.
 - While the plant can be grown from seed, germination can be uneven. You can start the seeds indoors during the winter by sowing seeds in pots or flats and keeping them in the refrigerator for 4 to 6 weeks. After 4 to 6 weeks, put the seeds in a sunny spot.
 - Set seeds one inch deep. Space asters 1 to 3 feet apart, depending on the type.
- Water plants in well. Add mulch after planting to keep soil cool and prevent weeds.
